About Superior Pipeline Company, L.L.C.

Founded in 1996, Superior is a midstream company engaged in gathering, processing, and treating of natural gas. The company owns three natural gas treatment plants, fifteen processing plants, and 39 active gathering systems consisting of 1,435 miles of pipe. Superior currently has operations throughout the state of Oklahoma, as well as Texas, Kansas, Pennsylvania., and West Virginia.

Products Transported and Counties Involved

Product	Description	Health and Fire Hazards	Counties Involved
Natural Gas	<p><u>Leak:</u> Gas</p> <p><u>Vapor:</u> Lighter than air. Very flammable and a white vapor cloud may be visible near the site of a leak.</p>	<p><u>Health:</u> Extremely high concentrations may cause irritation or asphyxiation. Possible presence of H₂S, a toxic gas.</p> <p><u>Fire:</u> Extremely flammable and easily ignited by heat, sparks or flames.</p>	<p>Caddo Canadian Custer Dewey Grady Grant Kay Kingfisher Lincoln Logan Oklahoma</p>
Propane or Butane	<p><u>Leak:</u> Liquid/Gas</p> <p><u>Vapor:</u> Heavier than air.</p>	<p><u>Health:</u> Respiratory tract irritant; may cause central nervous system effects.</p> <p><u>Fire:</u> Extremely flammable liquid or vapor; vapors may accumulate in low areas and travel considerable distances to an ignition source.</p>	<p>Grady Kay Lincoln Logan</p>

Product	Description	Health and Fire Hazards	Counties Involved
Natural Gas	Leak: Gas Vapor: Lighter than air. Very flammable and a white vapor cloud may be visible near the site of a leak.	Health: Extremely high concentrations may cause irritation or asphyxiation. There is a possible presence of H ₂ S, a toxic gas. Fire: Extremely flammable and easily ignited by heat, sparks or flames.	
Natural Gas	Leak: Gas Vapor: Lighter than air. Very flammable and a white vapor cloud may be visible near the site of a leak. Health: Extremely high concentrations may cause irritation or asphyxiation. There is a possible presence of H ₂ S, a toxic gas. Fire: Extremely flammable and easily ignited by heat, sparks or flames.		
Propane or Butane	Leak: Liquid/Gas Vapor: Heavier than air.	Health: Respiratory tract irritant; may cause central nervous system effects Fire: Extremely flammable liquid or vapor; vapors may accumulate in low areas and travel considerable distance to ignition source	Grady Kay Lincoln Logan
Other Highly Volatile Liquids (HVLs)- Natural Gas Liquids, Liquid Petroleum Gases, Ethane, etc.			
Carbon Dioxide (CO₂)	Leak: Gas Vapor: Heavier than air. If there is a leak in a CO ₂ pipeline, the product will become very cold when contact with the outside atmosphere is made. The area around the leak may look frozen or covered in frost. In wet areas, bubbling water or a muddy looking area may indicate a leak.	Health: Vapors may cause dizziness or asphyxiation without warning. Contact with CO ₂ may cause burns, severe injury and/or frostbite. Fire: A nonflammable gas that is heavier than air. Containers of CO ₂ may explode when heated and ruptured cylinders may rocket.	
Crude Oil	Leak: Liquid Vapor: Heavier than air. Can be flammable. Dark brown spots on the ground, dead vegetation or an oily sheen on top of the ground or floating on the surface of a body of water may indicate the presence of a leak in a crude oil pipeline system.	Health: Irritation of the eyes and skin may occur with exposure. Vapors may cause central nervous system effects. Fire: Crude oil is an extremely flammable liquid or vapor that is heavier than air. May accumulate in low areas, and may travel considerable distances to an ignition source.	
Hydrogen Sulfide	Leak: Gas Vapor: Heavier than air. A colorless gas at atmospheric temperature and pressure, can be found in natural gas and petroleum crude oil. Causes a foul odor in small concentrations	Health: Toxic, Paralyzes the sense of smell in higher concentrations. Fatal in higher concentrations, leave the area immediately. Fire: Flammable, will settle in low-lying areas.	
Anhydrous Ammonia	Leak: Vapor Vapor: Heavier than air.	Health: Fatal if inhaled, ingested or absorbed through the skin. Contact causes burns, server injury, and/or frostbite. Fire: May burn, but will not ignite readily. May react violently with water.
